Without the electricity hook-ups provided at most campground facilities, boondocking requires a complete, self-contained power system. While portable generators can serve as a valuable power source, they are noisy, poor for the environment, and require lots of additional fuel to run. Solar power, on the other hand, is abundant, quiet, and clean.

That's when battery capacity comes into play. You need enough to get all of your stuff thru the 16 hours that solar doesn't produce, and then enough solar to replace what you used and cover your daytime loads in the 6 to 8 good solar hours. I had 700 watts of solar, 800 AH of battery, in Florida, in winter, but no shading because we were on a boat.
