One of the big advantages of CSP plants (over photovoltaics) is their ability to couple with thermal energy storage (TES) systems. At present, considering an average storage cost of 22 US\$/kWh for the commercial thermal energy storage system in CSP plants, the cost of TES systems for utility scale applications is still ~30-150 times lower than that of electricity ...

In an effort to track this trend, researchers at the National Renewable Energy Laboratory (NREL) created a first-of-its-kind benchmark of U.S. utility-scale solar-plus-storage systems. To determine the cost of a solar-plus-storage system for this study, the researchers used a 100 megawatt (MW) PV system combined with a 60 MW lithium-ion battery that had 4 hours of storage (240 ...
