Amorphous (thin film) panels are the cheaper and less efficient modules within the industry, made of silicone and steel. Polycrystalline (poly silicon) solar panels are easily identifiable by their noticeable blue coloring. These panels are much more efficient than amorphous panels but require more space than monocrystalline panels. Due to their higher silicon purity, ...

The award winning, next generation building panel and system is a total build solution for the construction industry. Solaris products have endless applications from architectural cladding to walls, roofing, industrial projects as well as agricultural and residential applications.

Solar companies that are licensed, insured and hold certifications take their business seriously. Look for companies that have NABCEP Certified professionals or certified electricians on staff and are properly insured, so their workers, and you, are protected. Not everyone has thousands of dollars to spend on a solar panel installation.
