panel into useful frequency alternating current. This electricity can then be fed into the commercial grid or used by the off-grid network.

**Types of Inverters.** There are several types of inverters that might be installed as part of a solar system. In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels--a string--to one inverter. That inverter converts the power produced by the entire string to AC.
