Globally speaking, China is the country with the most rapid development of UHV technology. Until 2019, 20 UHV transmission lines have been built by the State Grid Corporation of China (SGCC, 2019), and 3 lines have been built by the China Southern Power Grid (CSG, 2019) ter-regional power transmission through UHV technology could bring ...

The environmental value of UHV transmission grids depends largely on the proportion of renewable energy transmitted. The government should accelerate the development of renewable energy, enhance the grid connection capacity of renewable energy, and ensure the safe operation of the power grid.

The TC is working on a new standard, IEC 62933-5-4, which will specify safety test methods and procedures for li-ion battery-based systems for energy storage. IECEE (IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components) is one of the four conformity assessment systems administered by the IEC.

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn"t blowing and the sun isn"t shining. The Energy Department is working to develop new storage technologies to tackle this challenge -- from supporting research on battery storage at the National Labs, to making investments that take ...
