The thermal behavior of various solar energy storage systems is widely discussed in the literature, such as bulk solar energy storage, packed bed, or energy storage in modules. The packed bed represents a loosely packed solid material (rocks or PCM capsules) in a container through which air as heat transfer fluid passes.

In direct support of the E3 Initiative, GEB Initiative and Energy Storage Grand Challenge (ESGC), the Building Technologies Office (BTO) is focused on thermal storage research, development, demonstration, and deployment (RDD& D) to accelerate the commercialization and utilization of next-generation energy storage technologies for building applications.
