Uninterruptible power supply computer

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.

The CP800AVR uses a modified sine-wave inverter to turn the DC power in the battery into a rough approximation of standard AC power. Rated for at least 600 VA output: Most models explicitly ...

An uninterruptible power supply, or battery backup, can help protect your computer. It can provide backup power when the electricity goes out, act as a power “conditioners” to keep electricity flowing to your computer and accessories free from drops or surges, and decrease noisy power sources.

Many models of uninterruptible power supply USP also provide surge protection. A surge protector blocks spikes in voltage so that they do not harm your electronics. So, your battery backup is always at work, protecting your desktop computer, network equipment, or other electronic equipment and charging its battery when not in use.

The Load is the combined amount of power each of the devices use. To identify the load, make an equipment list, including the total watts each piece of equipment requires to run properly. Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply.
