Vanadium redox flow batteries are praised for their large energy storage capacity. Often called a V-flow battery or vanadium redox, these batteries use a special method where energy is stored in liquid electrolyte solutions, allowing for significant storage. Lithium-ion batteries, common in many devices, are compact and long-lasting.

As a result, vanadium batteries currently have a higher upfront cost than lithium-ion batteries with the same capacity. Since they're big, heavy and expensive to buy, the use of vanadium batteries may be limited to industrial and grid applications.

The first vanadium flow battery patent was filed in 1986 from the UNSW and the first large-scale implementation of the technology was by Mitsubishi Electric Industries and Kashima-Kita Electric Power
