Energy Storage Systems are structured in two main parts. The power conversion system (PCS) handles AC/DC and DC/AC conversion, with energy flowing into the batteries to charge them or being converted from the battery storage into AC power and fed into the grid. Suitable power device solutions depend on the voltages supported and the power flowing.

While waiting for renewable energy technologies to fully mature enough and replace fossil-based fuel, carbon capture storage and utilisation of fossil-based emissions are crucial as a transition state (Zhang et al. 2016, 2020a). For instance, integrated gasification combined cycle (IGCC) is a common approach coupled with carbon capture and ...
