Energy storage system integration is complex and current approaches can often limit collaboration and flexibility, writes Leon Gosh, managing director of Collect. The rapidly growing energy storage industry is the key to a 100% sustainable energy landscape powered by renewables. Yet, a critical hurdle stands in the way of achieving this clean ...

Similarly, distribution grid-connected energy storage is often considered a combination of a consumer and a producer. For example, the Croatian Distribution grid code does not include energy storage as a separate entity, but defines it as a subset of prosumers []. This categorisation implies that energy storage connected to the distribution grid can only trade ...

Fluence has a track record of being the integrator of choice for ground-breaking energy storage projects. Last month, it was revealed that the US-headquartered integrator had been selected by Tilt Renewables to deliver the 100 MW / 200 MWh Latrobe Valley battery energy storage system (BESS) located south of Morwell in Victoria.

Historically, energy storage buyers relied on legacy integrators to purchase and integrate ESS sub-components directly from manufacturers because it was the most convenient option, or in some cases, the buyer lacked internal technical resources to perform low-level integration (i.e., component selection, CFD analysis, PLC design, etc.).

As Energy-Storage.news has previously written, adding capacity to existing battery storage projects is going to be a big part of what developers and system integrators do in the coming years with multi-gigawatts of projects now up-and-running.
