### What s going on with the planets

We live in an amazing planetary system. From the yawning Valles Marineris on Mars and the subsurface ocean hiding beneath the ice crust of Jupiter"s moon Europa, to the eerily Earth-like terrain of Saturn"s moon Titan, the solar system brims with wonders. And let so not forget the Sun, with its mysteriously hot corona and solar flares.. Here you"ll find the latest news from our ...

Interior structures of Earth, Mars and the Moon, to scale All of the terrestrial planets have a three-part layered structure. At the center is a metallic, iron-rich core, part of which may be molten. Above the core is a thick middle layer called the mantle, made of silicate rock (composed mostly of silicon, oxygen, iron, and magnesium), making up most of the bulk of the planet.

A New Moon in the sky means no moonlight to hinder your view of stars and planets. Use our Interactive Night Sky Map to find out what planets are visible tonight and where. Sep 5: Mercury at Greatest Elongation West 5 Sep. This might be a good time to try and spot Mercury: the planet appears at its farthest distance from the Sun in the morning sky.

Topping the list is liquid water. Despite a broad spectrum of environmental conditions inhabited by living things on Earth, all life on the planet seems to require it. Liquid water provides a medium for the chemical components of life to persist over time and come together for reactions, in a way that air or the surface of a rock don"t do as ...

Beyond Neptune, a newer class of smaller worlds called dwarf planets reign, including longtime favorite Pluto. The other dwarf planets are Ceres, Makemake, Haumea, and Eris. Ceres is the only dwarf planet in the inner solar system. It's ...

2 days ago· Most of these planets were discovered using the transit method. though we there are other methods as well. Many stars are known to have multiple planets, such as the TRAPPIST-1 system with seven ...

"Life on planet Earth is under siege," he says. "Whether you look at planetary boundaries or our planetary vital signs, it"s telling a similar story in that this is going to take major ...

Celestial News & Events. This Week's Sky at a Glance, October 25 - November 3. Fading Comet Tsuchinshan-ATLAS poses high in a moonless sky for its fans with binoculars and telescopes, even as we wave farewell for at least a hundred thousand years, maybe forever.

Each of the planets (which for astrology includes the sun and the moon) control a different aspect. In general terms they can be listed as: The Sun, Moon, Mercury, Venus and Mars are the personal planets which affect our personalities and immediate relationships. The more distant planets affect how we interact with the world

#### What s going on with the planets

in a more general way.

If the planet you are standing on is twice as massive, gravity also pulls on you twice as hard. On the other hand, the farther you are from the center of the planet, the weaker the pull between the planet and your body. The force gets weaker quite rapidly. If you double your distance from the planet, the force is one-fourth.

"But to actually be able to see these, you need to be zooming in to one target so much that you"re not seeing the others anyway, so you"d be getting rid of all your field of view," he said. The order in which the planets will align on Sunday is Jupiter, Mercury, Uranus, Mars, Neptune and Saturn, and they will be accompanied by a crescent moon.

Tests on Earth appear to confirm how the Red Planet's spider-shaped geologic formations are carved by carbon dioxide. Since discovering them in 2003 via images from orbiters, scientists have marveled at spider-like shapes sprawled ...

Planets retrograde under the influence of various constellations, which can dramatically influence the tenor of the lessons. (Photo: powerofforever | Getty) How to Navigate Planets in Retrograde. When planets are in retrograde, the world around us continues to move forward but we are invited to bring space into our days wherever possible.
