

What was in the sky right now

All-sky charts of the night sky from In-The-Sky , showing what stars and planets you'll be able to see in the night sky on any given day of the year. In-The-Sky . Guides to the night sky. Location: Redmond (47.67°N; 122.12°W) Charts of the Night Sky. Home Charts. News ...

The interactive sky chart offers a lot in the way of customizing what you want to see. Chart the stars and planets visible to the unaided eye from any location, at any time of day or night, on any date between the years 1600 to 2400 by entering your location, either via zip code, city, or latitude/longitude.

NOTE: values for the closest approach are computed with a sampling interval of 1 day. Light Curve. The following chart is the predicted light curve (visual magnitude as a function of time) of Mars, according to the most recent ephemerides data. Magnitude data is sampled with a 2 days interval and there might be inaccuracies for objects changing brightness very rapidly during ...

The moon is close to the sun in the sky and mostly dark except for the right edge of the moon which becomes brighter as the days get closer to the next phase which is a First Quarter with a 50% illumination. Visit the November 2024 Moon Phases Calendar to see all the daily moon phase for this month. Today's Waxing Crescent Phase

NOTE: values for the closest approach are computed with a sampling interval of 1 day. Light Curve. The following chart is the predicted light curve (visual magnitude as a function of time) of The Sun, according to the most recent ephemerides data. Magnitude data is sampled with a 2 days interval and there might be inaccuracies for objects changing brightness very rapidly ...

Comet Tsuchinshan-ATLAS might be visible to the naked eye in the coming weeks. Show the comet on our Night Sky Map (below). Our Interactive Night Sky Map simulates the sky above . The Moon and planets have been enlarged slightly for clarity. On mobile devices, tap to steer the map by pointing your device at the sky.

As the Earth rotates on itself, we see the sky scrolling as if we were on a ride: the whole sky seems to turn the hours around a point near Polaris, the North Star (center of the map). This causes the "rises" and "sets" of the stars.

What is Visible Now? Tonight Timeline. Jupiter's Galilean Moons. Saturn's Rings and Moons. Moon Calendar. Solar Eclipses. Content. ... Set Location. Please set your location so we can show precisely what's visible in your night sky. Without your location, we will use Greenwich as a default, but visibility information and star map automatic ...

You'll see some of the brightest stars in the night sky in the famous winter constellations: Rigel and Betelgeuse in Orion (as well as Orion's belt rising on its side), Aldebaran in Taurus, Capella in Auriga, Pollux and Castor in Gemini, Procyon in Canis Minor and Sirius in Canis Major.

What was in the sky right now

VISIBILITY RIGHT NOW. Neptune is below the horizon from Greenwich, UK. Given its current magnitude, Neptune is visible with the help of a binocular with a 30-40mm aperture, easy with a small telescope. Go to [interactive sky chart](#)

The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. [How Do I Use the Interactive Sky Chart to Explore the Night Sky?](#) Learn sky chart basics in our short tutorial:
