For technologies with no fuel costs and relatively small variable costs, such as solar and wind electric-generating technologies, LCOE changes nearly in proportion to the estimated capital

For example, if 70 percent of average power generation is to be guaranteed using battery storage, then a hybrid generator of solar, offshore wind and wave energy in the ratio of 1:1:1, could require less than half the CAPEX compared with a hybrid solar and offshore wind farm, and one third the cost of a hybrid solar and onshore wind farm.
