Many metal alloys (primarily aluminum alloys) can also store latent heat with favorable cycling stability, the thermal conductivity of metal alloys is dozens to hundreds times higher than most salts (Kenisarin, 2010, Gil et al., 2010, Agyenim et al., 2010, Liu et al., 2012, Cheng et al., 2010a), Several studies have been reported on the thermophysical properties of ...

Carnot batteries, a type of power-to-heat-to-power energy storage, are in high demand as they can provide a stable supply of renewable energy. Latent heat storage (LHS) using alloy-based phase change materials (PCMs), which have high heat storage density and thermal conductivity, is a promising method. However, LHS requires the development of a PCM with a melting point ...
