Fan concept for The Legend of Zelda series. Link's companion in this concept is a sentient lock named Talock. He was the one keeping close a chest (sentient too), where monsters were sealed but someone opened it, so he latched onto Link's arm and refused to leave until monsters are sealed again. He comes with a handy set of base abilities (shield, grapple, hint system,...) ...

Prof. Dr.-Ing. Michael Sterner researches and holds courses on energy storage and regenerative energy industries at Regensburg University of Applied Sciences, and develops energy storage concepts for companies and municipalities. Together with colleagues, he previously launched the Power-to-Gas storage technology, which remains his chief research interest.

Long-duration energy storage (LDES) is the linchpin of the energy transition, and ESS batteries are purpose-built to enable decarbonization. As the first commercial manufacturer of iron flow battery technology, ESS is delivering safe, sustainable, and flexible LDES around the world.

Battery electricity storage is a key technology in the world's transition to a sustainable energy system. Battery systems can support a wide range of services needed for the transition, from providing frequency response, reserve capacity, black-start capability and other grid services, to storing power in electric vehicles, upgrading mini-grids and supporting "self-consumption" of ...

Even though each thermal energy source has its specific context, TES is a critical function that enables energy conservation across all main thermal energy sources [5] Europe, it has been predicted that over 1.4 × 10¹⁵ Wh/year can be stored, and 4 × 10¹¹ kg of CO₂ releases are prevented in buildings and manufacturing areas by extensive usage of heat and ...

Energy storage technology plays a vital role in advanced electronic and power systems [1], [2], [3]. Among them, dielectric ceramic capacitors show great potential in consumer electronics, pulse power applications, commercial defibrillators, and other markets owing to their ultrahigh power density, fast charging/discharging speed, and excellent reliability [4, 5].

For over 86 years, Lockheed Martin has invested in resilient, smart and safe energy technologies. As the clean energy evolution continues, the current dominant technologies cannot provide the durable, flexible and distributed energy storage required to sustain power for extended durations. That's why we developed GridStar® Flow.

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

Energy storage systems act as virtual power plants by quickly adding/subtracting power so that the line frequency stays constant. FESS is a promising technology in frequency regulation for many reasons. Such as it reacts almost instantly, it has a very high power to mass ratio, and it has a very long life cycle compared to Li-ion batteries. ...
